RE: Carbon Dioxide in Western Canada – Urgent Attention Required

We wish to notify you of a recent and unforeseen plant closure from our main source of carbon dioxide (CO₂) in Medicine Hat, Alberta. In order to avoid interruption of supply, plans are underway to obtain alternate supply. Effective immediately, a surcharge for such alternate supply will apply to all dry ice products. This surcharge is to cover the transportation cost of the liquid CO₂ moving by road instead of railcar. The current surcharge is set at **49.75%** of your current rate, effective November 17th, 2022. Any adjustment to the surcharge will be communicated to you.

Updates will be provided when they become available by email. If you wish to have other email addresses included on the communication, please send the email addresses to info@fraservalleydryice.com

At this time, we have no further information on the cause, or estimated timeline until the situation is resolved. On a short-term interim basis, we suggest that you take appropriate measures to reduce or eliminate your consumption of dry ice while alternate sources of CO₂ supply are finalized. Fraser Valley Dry Ice values your business and we regret any inconvenience that this situation may cause your organization.

Should you have any questions or concerns please contact Paul Thomson (604) 374 - 0413 or Jeff Readhead (778) 874-2182

Sincerely,

Fraser Valley Dry Ice
